

THE HEART TEST

Are you at risk for heart disease? The Heart Test can help you find out. It can tell you what risks you face and, most important, what you can do to reduce controllable cardiovascular risk factors. In other words, it may help save your life.

Heart disease is the leading cause of death in the United States. The real tragedy is that so many of these deaths might have been prevented by early detection and treatment. The Heart Test only takes a few minutes. But those few minutes could make all the difference.

Risk factors for which a person has no control

	10 – 20 <i>1 point</i>	21 – 30 <i>2 points</i>	31 – 40 <i>3 points</i>	41-50 <i>4 points</i>	51-60 <i>6 points</i>	61-70 <i>8 points</i>	Score
AGE:							_____
SEX:	Female Under 40 <i>1 point</i>	Female 40 - 56 <i>2 points</i>	Female after menopause <i>4 points</i>	Male 25 – 44 <i>5 points</i>	Male 45 – 64 <i>6 points</i>	Male 65 & over <i>7 points</i>	_____
HEREDITARY:	No known history of heart disease <i>1 point</i>	1 relative with heart disease after age 60 <i>2 points</i>	2 relatives with heart disease after age 60 <i>3 points</i>	1 relative with heart disease before age 60 <i>4 points</i>	2 relatives with heart disease before age 60 <i>6 points</i>	3 relatives with heart disease before age 60 <i>7 points</i>	_____

Risk factors which can be controlled

	More than 5 pounds below standard weight <i>0 point</i>	+/- 5 pounds standard weight <i>1 points</i>	6-20 pounds overweight <i>2 points</i>	21-35 pounds overweight <i>3 points</i>	36-50 pounds overweight <i>5 points</i>	51-65 pounds overweight <i>7 points</i>	Score
